

RADIAN COMPLIANCE

Information Security Cybersecurity Privacy Protection Information Security Management System (ISMS) ISO 27001

Radian Compliance, LLC is recognized as a global leader in supporting clients to achieve or sustain certification to ISO 27001. Our 100% successful methodology is focused on risk mitigation, continual improvement and partnership. Radian's team provides its expertise and best practices to support each client's unique information security requirements in preparing or sustaining an ISMS certification.

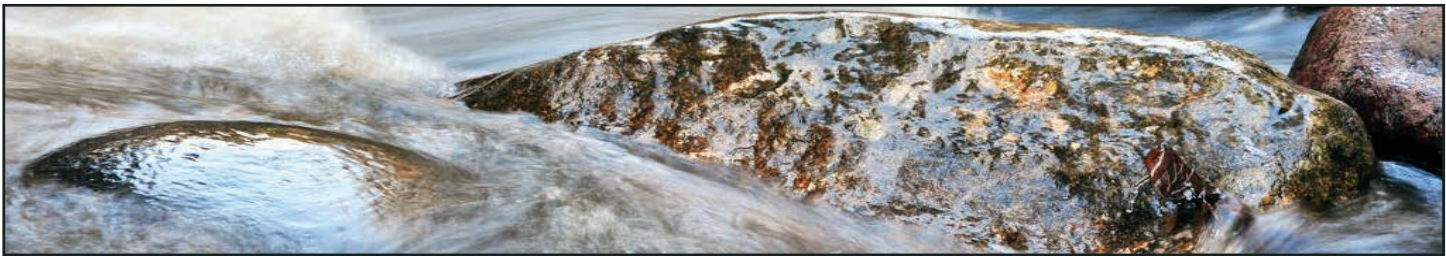

Why implement and certify to ISO 27001

- Provide confidence to your customers that their information is being protected.
- Identify risks and create effective risk treatment plans.
- Respond to the numerous security questionnaires of clients and partners with a standardized set of Information Security Controls.
- Engage the entire organization in the practice of information security with ownership and responsibility of process, risks, and monitoring of controls.
- Reduce organizational risk from third party/hosted services by utilizing a structured supplier risk management program.
- Become rapidly compliant with new information security regulations and mandates by having an ISMS that is continually monitored, improved, and reviewed for effectiveness and sustainability.
- Be proactive instead of reactive to potential threats and vulnerabilities.
- Provide additional privacy controls to meet evolving regulatory requirements by including **ISO 27701*** to the ISMS.

Radian Compliance's 100% successful methodology

- 1. Scope identification and gap analysis** against the standard and clients' current controls.
- 2. Implementation and education** to gaps, goals and objectives as defined by the requirements of the standard and the client's business and customer needs.
- 3. Internal audit** support with qualified internal auditor resources.
- 4. Certification support and ongoing maintenance assistance** during certification audits, and support during surveillance audit years.

*ISO 27701 – Privacy Information Management System (PIMS) is an extension to ISO 27001 specific to privacy and the role of data controller and/or data processors.

The Radian ISMS Difference

Radian team members' experiences are deeply rooted in information security. Not only are we experts in the ISO process, but we have the up-to-date technical expertise to support the wide array of ISMS requirements, including risk management, physical security assessments, penetration testing, and business continuity. Our team is constantly studying updates and providing relevant information about persistent and new threats to our customers. We are active in security organizations, including ASIS International, (ISC)2, and AITP.
