

RADIAN COMPLIANCE

Supply Chain Security Management (SCSM) Security and Resilience – ISO 28000

Open Trusted Technology Provider™ Standard (O-TTPS) – ISO/IEC 20243 Mitigating maliciously tainted and counterfeit products.

Organizations require security assurance of their supply chain. Almost every day there is a news article concerning a disruption to a supply chain—whether it be a security issue with physical transport or through a cybersecurity incident. Wherever you fit into the supply chain, from supplying raw materials to delivering finished goods, the integrity of your customer’s property within the supply chain is essential.

Standards create a security system that will protect people, goods, infrastructure, equipment, and transportation against security incidents, maliciously tainted or counterfeit products, and other potentially disruptive situations. It also provides an organization a solid base to identify, assess, control, and mitigate its supply chain security risks. This standard requires identification of the following security risks. **Key risk areas include:**

- Physical or functional failures and malicious criminal acts.
- Environmental, human, and cultural factors, and other internal or external contexts, including factors outside the organization’s control affecting the organization’s security.
- The design, installation, maintenance, and replacement of security equipment.
- The organization’s information, data, knowledge, and communication management.
- Information related to security threats and vulnerabilities.
- The interdependencies between suppliers.

Why implement and certify to ISO 28000 and/or ISO 20243

- Identify risks to supply chain security and create effective risk treatment plans.
- Create security plans to address disruptions up chain or down chain to ensure you can meet your contractual requirements.
- Conduct a 3rd party assessment to this standard which will provide an organization a competitive edge in a very competitive market.
- No longer “throw accountability” over the fence to your suppliers. Understand your role in using cloud services.
- As a cloud service provider, ensure you can meet the strict requirements of clients in protecting their information.

Radian Compliance’s 100% successful methodology:

- 1. Scope identification and gap analysis** against the standard and clients' current controls.
- 2. Implementation and education** to gaps, goals and objectives as defined by the requirements of the standard and client’s business and customer needs.
- 3. Internal audit** support with qualified internal auditor resources.
- 4. Certification support and ongoing maintenance** assistance during certification audits and support during surveillance audit years.

The Radian SCSM Difference

All ISO standards that Radian supports have some element of outsourced process governance. We recognized years ago that we must create a consulting methodology that incorporates a common approach to ensure clients consistently are able to identify the risks at any level of the supply chain. Our approach is tailored to the Client and their requirements to provide or consume cloud and 3rd party services. Our team members are not only ISO experts but have extensive knowledge and certifications in cloud services. Managing Partner, Lisa DuBrock, is a member of the ISO U.S. technical committee for ISO 28000.
